# Access to University accredited manufacturing education when, where and how your company needs it

## FLEXIBLE LEARNING PHILOSOPHY

**The program was designed to meet the Training and Education needs of the Manufacturing Industry by developing learning environments that can be accessed anywhere.**

All of the courses available from the Advanced Manufacturing Centre can be taken over the Internet or as an Intensive Workshop, at the company or at a regional venue. The AMC's virtual network also means that participants can access learning and administrative resources regardless of their location.

### ONLINE BENEFITS

- You can study anywhere in the world. All you need is access to a computer with a web browser, connection to the Internet and a modem.
- You can study at a time convenient to you. Although some courses are interactive you don't need to be online at the same time as other students and teaching staff.
- You have access to a high quality, postgraduate environment, one which will stimulate, challenge and extend your learning.

### AVAILABLE RESOURCES

Located at the Australian Technology Park, the AMC collaborates with Universities and Cooperative Research Centres around the world, TAFE, technology diffusion centres such as the Queensland Manufacturing Institute and Industry Groups supporting specific manufacturing sectors.

The Centre also has alliances with technology centres such as IRIS and JD Edwards, allowing participants access to the cutting edge technologies in their particular field of study.

## UNIVERSITY OF SOUTH AUSTRALIA

The University of South Australia is a modern, vibrant and successful institution, built on more than a century's experience as a leader in teaching, learning and applied research. These programs bring together the resources of the university's School of International Business and its School of Advanced Manufacturing and Mechanical Engineering.

## THE ADVANCED MANUFACTURING CENTRE

The Centre is a one-stop shop for manufacturing enterprises seeking to acquire, implement or manage new technology with the corresponding training and education programs to improve Australian manufacturing competitiveness.

## PROGRAM HISTORY

The Program has been running since 1996 and has evolved through industry involvement in development and delivery. Smartlink runs in industrial settings, as in-house programs and in regional centres.

Past participants have come from companies such as Email, VisyBoard, Codan and Mitsubishi Motors.

The development of Smartlink has been supported by Australian Business Ltd, the SA Centre for Manufacturing, the Northern Adelaide Development Board, Redcentre, Advanced Manufacturing Centre at the Australian Technology Park, The Queensland Manufacturing Institute, the Institution of Engineers Australia and the City of Playford.

## WHY IS SMARTLINK UNIQUE?

*A Bachelor Degree is NOT required for entry*

All prior education and work experience is taken into consideration for admittance to the program, however, there is a minimum requirement of years spent in management in industry in place of tertiary qualifications.

*Take as long as you want to complete the courses*

Once you're enrolled you only pay small annual fee if you decide to spend more than one semester on an on-line subject.

*You can access all courses in your preferred learning style*

All courses can be taken on-line, in-house or via traditional distance education

*University Accreditation is Optional*

You can enroll in courses individually or as part of the Graduate Certificate Program
